Rapportering till EU-kommissionen om övervakning på gemenskapsnivå av import av stenkol med ursprung i tredje land

Härmed redovisas importstatistik avseende stenkol under föregående halvår i enlighet med rådets förordning nr 405/2003 av den 27 februari 2003. Rapporteringen är ställd till Näringsdepartementet. Rapporteringsperioden avser andra halvåret 2009. Ingen revidering av tidigare levererad statistik har skett.

Beslut i detta ärende har fattats av enhetschefen Caroline Hellberg. Vid den slutliga handläggningen har därutöver föredragande handläggaren Malin Lagerquist deltagit.

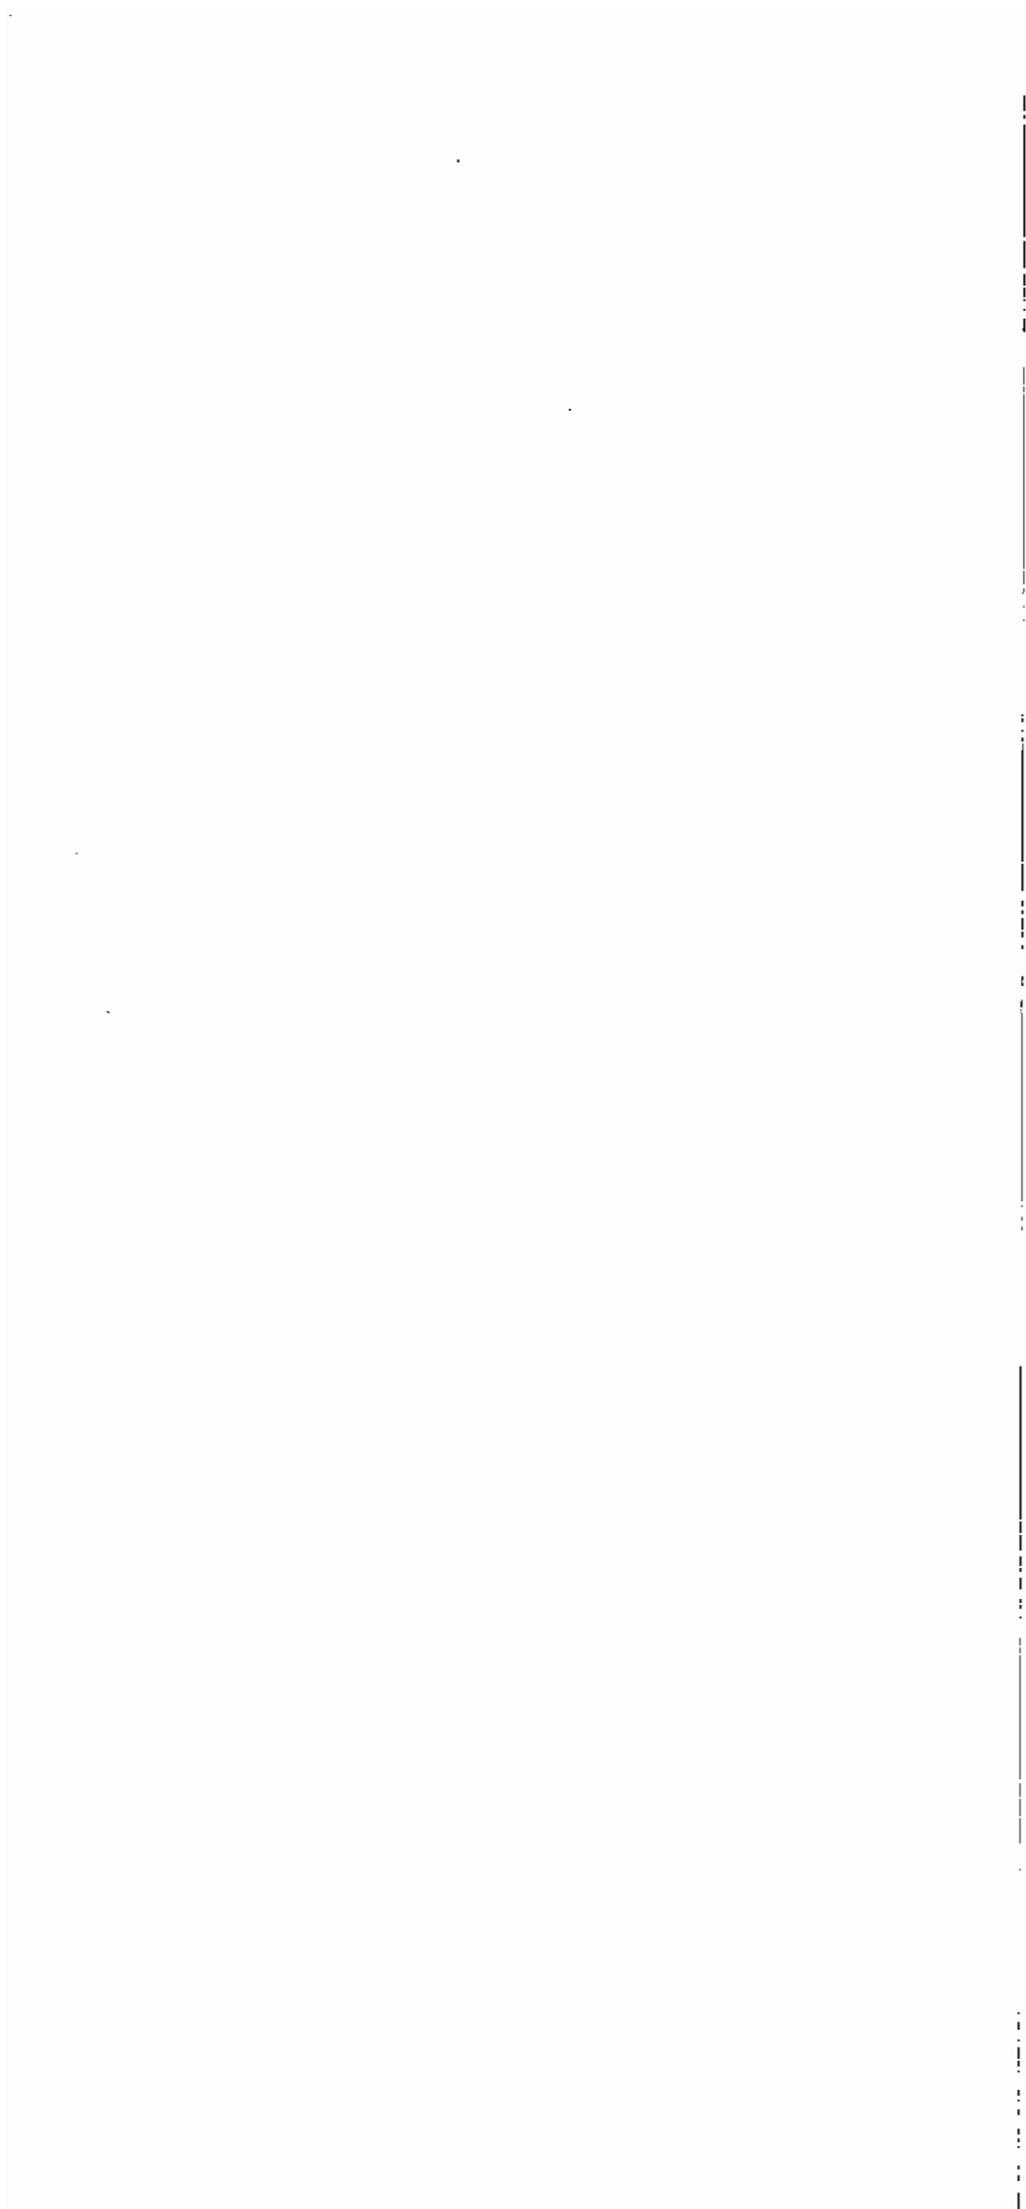

Bilaga:
Kolrapportering med statistik för andra halvåret 2009

Caroline Hellberg

Malin Lagerquist

With the US dollar being the main currency in international coal trade and in order to ensure consistency with currency exchange rates, please provide the price information in US dollars. The Commission will undertake the conversion to Euros.

A. Hardcoal intended for the production of electricity and/or for combined heat and power generation.

The following should be provided to the Commission:

Year/semester	2 nd half of 2009	Sweden
Tonnes:	101 721	Unit t
Net Low Calorie Value:	26,53	Unit GJ/t
Average importprice:	109,8	Unit USD/tce

In order to calculate the average value for the Member State, the “import price” of thermal coal will need to be converted using the price of the “tonne coal equivalent (tce)” as follows:

→ If the net low calorie value (NLCV) of a tonne hard coal is expressed in **GJ/t**:

$$\text{Price per tce} = \frac{\text{Price per tonne} * 29,302}{\text{NLVC}}$$

→ If the net low calorie value (NLCV) of a tonne hard coal is expressed in **Kcal/kg**:

$$\text{Price per tce} = \frac{\text{Price per tonne} * 7000}{\text{NLVC}}$$

B. Hardcoal intended for the production of coke for blast furnaces

The following should be provided to the Commission:

Year/semester	2 nd half of 2009	Sweden
Tonnes:	646 858	Unit t
Average importprice:	154,7	Unit USD/tce

In order to calculate the average value for the Member State, the “import price” of cooking coal will be converted using the following reference grades and the mathematical formula (1):

- **Moisture (EO): 8%**
The price will be corrected by 1% for each 1% difference.
- **Ach, dry (CO): 7,5%**
The price will be corrected by 2% for each 1% difference.
- **Volatile matter, dry (MO): 26%**
The price will be corrected by 0,3% for each 1% difference.
- **Sulphur, dry (SO): 0,8%**
The price will be corrected by 5% for each 1% difference.

$$(1) PO = P\{1+1/100((E-EO)+2(C-CO)+0,3(M-MO)+5(S-SO))\}$$

PO = Average import price – coal import price in standard conditions above mentioned

P = Coal imported price

E = % water in the imported coal

C = % dry ash in the imported coal

M = % dry volatile matter in the imported coal

S = % dry sulphur in the imported coal
